Did the New Website Feature Work?

A/B Test Results and Recommendations

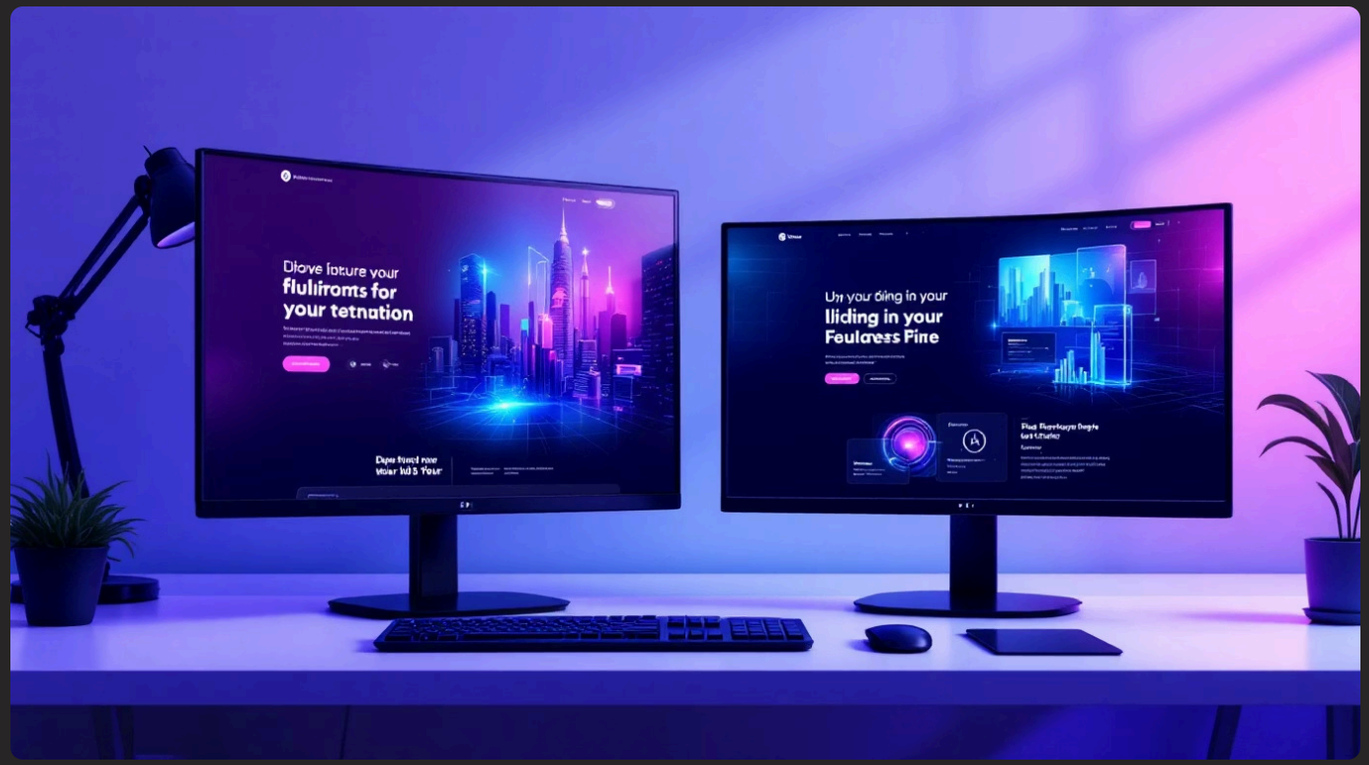
Presenter: Maryam Fatima

Made with GAMMA

What Were We Trying to Find Out?

We tested a new website feature to answer one simple question: **does it get more users to convert than the current experience?**

The test ran for 14 days with 10,000 users randomly assigned to ensure fair comparison between the existing website and the new feature.



01

10,000 Users

Participated in the test

02

Two Groups

Half saw existing (Control), half saw new (Treatment)

03

14 Days

Test ran for two full weeks

Made with GAMMA

The Result in One Number

The New Feature Increased Conversions by 23%

9.58%

Current Version

Conversion rate

11.80%

New Feature

Conversion rate

+23%

Improvement

More conversions

Made with GAMMA

Real Business Impact

What Does This Mean in Practice?

22 Extra Conversions

For every 1,000 visitors to the website, the new feature generates 22 additional conversions compared to the current version

220 Monthly

At 10,000 users per month, that translates to approximately 220 extra conversions every month

Consistent

This is a consistent and reliable improvement, not a one-time spike or temporary effect

Made with GAMMA

Is This Result Reliable?

Yes. The Data Backs It Up.

Statistically Significant

Only a 0.02% chance this result happened due to random chance—this is highly unlikely to be noise

Practically Significant

The improvement exceeds our minimum meaningful threshold of 1%, making this a business-impactful change

Highly Powered

97% probability we would detect a true effect if one exists—our test had strong statistical power

Consistent

The lift held steady across all 14 days of the test, showing sustained performance

Made with GAMMA

The Improvement is Not Limited to One Group

It Works for All Users

Casual Browsers

Low engagement users

Regular Users

Medium engagement users

Highly Engaged

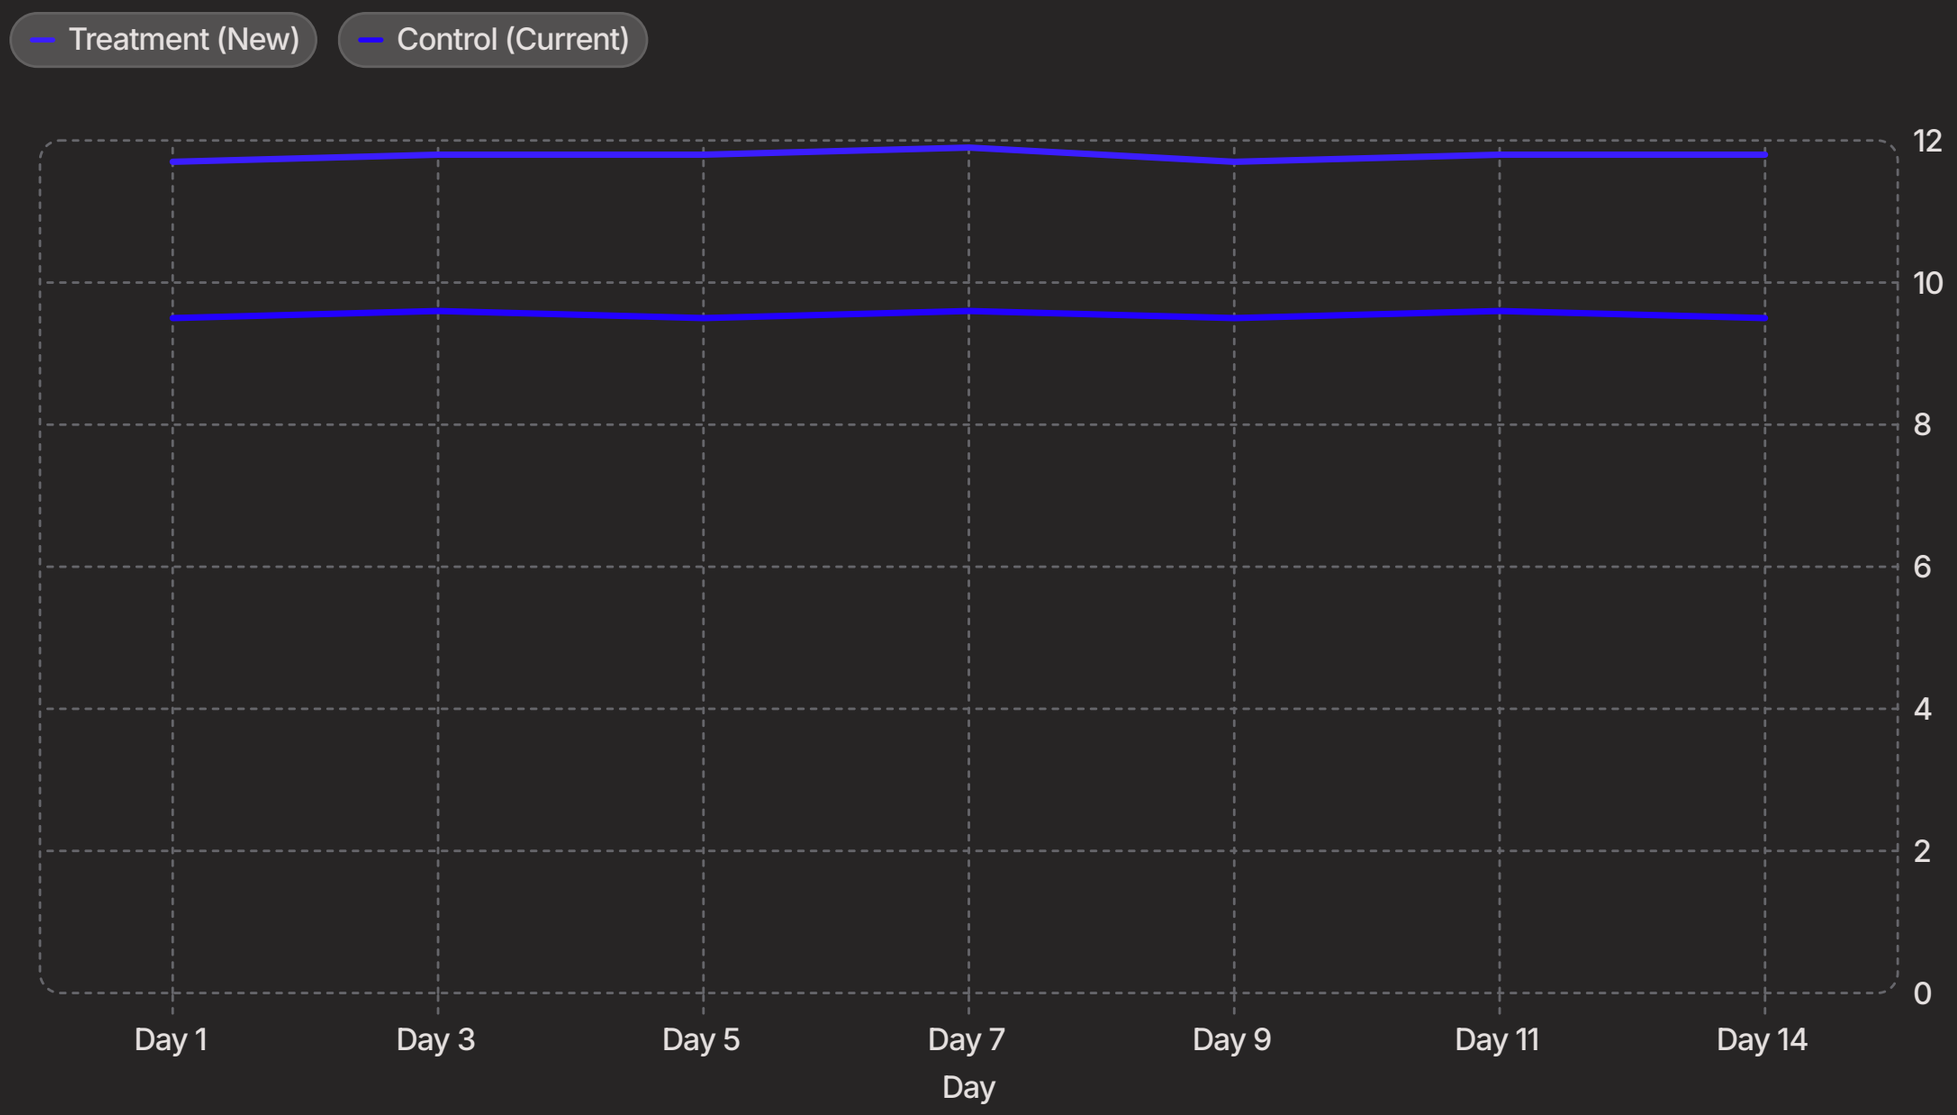
High engagement users

The new feature works broadly across all types of users, not just a specific segment. The improvement scales with engagement level, with the highest lift seen among your most active users.

Made with GAMMA

The Lift Was Stable Throughout the Entire Test

Consistent Every Single Day



The blue line (Control group with current version) stays around 9.58%, while the teal line (Treatment group with new feature) stays around 11.80%. **The gap between the lines remains consistent throughout.** This is not a novelty spike, the improvement is real and sustained.

Our Recommendation

Ship the Feature

The evidence is clear. Roll out the new feature to all users.

23% More Conversions

It drives 23% more conversions than the current version

Statistically Confirmed

The result is both statistically and practically confirmed

Broadly Effective

It works consistently across all user types and across all 14 days of the test

Made with GAMMA

Next Steps After Rollout

What We Do After Launch

Launch (Week 1)

Roll out the new feature to 100% of users. Monitor initial rollout for any technical issues or unexpected behavior.

Monitor (Weeks 2 and 3)

Track daily conversion rates and watch for any drop back toward the old baseline. Set an alert if conversion rate falls below 10.5%.

Optimize (Month 2 onwards)

Run follow-up experiments to test variations of the feature such as different layouts, copy, or placement to push performance even further beyond 11.80%.

Made with GAMMA

Key Takeaways

- We tested a new website feature on 10,000 users over 14 days
- The new feature increased conversions from 9.58% to 11.80%
- That is a 23% relative improvement and 22 extra conversions per 1,000 users
- The result is statistically confirmed with 97% confidence
- Recommendation: ship the feature and monitor performance after launch

---

The new feature works. The data is clear.
